

## **PROJECT REPORT**

I chose GitHub, LinkedIn, and Kaggle as they align with my CS journey at VIT Bhopal.

GitHub is for version control, hosting code, and collaborating on open-source—perfect for sharing AI projects and building a portfolio.

LinkedIn networks professionals, showcases education (B.Tech CSE, expected 2029), and attracts recruiters for internships in AI firms.

Kaggle focuses on data science competitions, datasets, and notebooks—ideal for practicing ML algorithms like minimax I've studied.

Over four years, I'll use GitHub daily for course projects and a profile README to track growth; LinkedIn monthly for connections, posting AI learnings, and job alerts; Kaggle weekly for competitions (starting Titanic) to rank up and solidify agentic AI knowledge. Together, they'll build my resume for placements and exams like NTA NET, turning hobbies into career skills
